Features and Benefits

Applications

Steam conditioning requirements vary across every industry. Process plants, for example, require steady operation and precise temperature control, while Power plants rely on fast response and low noise emittance. Masoneilan SteamForm valves serve the entire range of steam conditioning, offering excellent noise control, temperature control, and fast operation while maintaining smooth flow control and reliable shut-off.

The Masoneilan SteamForm valves combines over 25 years of proven pressure reducing performance with a robust desuperheating design. Available with a wide selection of performance enhancing configurations, Baker Hughes offers the Best Fit solution for virtually every steam conditioning application. Each SteamForm valve solution provided by Baker Hughes is custom designed by an experienced engineering team to meet specific customer requirements. Masoneilan Steam Conditioning valves are designed using only robust and proven technology, materials, quality control practices, and manufacturing methods. The technology and material combinations used in the SteamForm are based on over 50 years of successful field experience in various industries.

Various Trim Types and Seal Options

The 84003 Series is available with a variety of trim types and seal designs to meet all requirements for shut-off, pressure/temperature regulation, and noise.

High Rangeability with up to 50:1 Turndown

Many applications use steam conditioning valves to throttle across a wide range of operating conditions. An example of this is turbine bypass, which often requires low-flow control for regulating pressure during startup, and high-flow capacity for full load rejection. Some applications require flow rangeability up to 50:1. For these applications, Baker Hughes engineers optimize the lift characteristic and pressure staging to ensure excellent control and performance at low-flow conditions.

Fast Response and Precision Control

The 84003 Series SteamForm Valves can be equipped with a rapid stroke actuator, capable of achieving full opening and/or closing in less than 1 second. This is a critical feature, necessary for protecting plant equipment during an upset condition, such as a turbine trip. Masoneilan actuators are equipped with a Masoneilan SVI™ II AP digital positioner, which provides best-in-class control accuracy and response.

General Data

Body Configurations:	Globe / Angle / Custom Offset (Z Body)
Seat Diameter:	50 mm (2 in.) to 600 mm (24 in.)
Rated Cv:	Up to 5800
Connections:	Butt Weld, RFF, RTJ, Socket Weld
Pressure Class	
Ratings:	Up to ASME Class 4500, Special and Intermediate (job rated)
Temperature:	Up to 650°C (1200°F)
Applicable Codes / Standards:	ASME B16.34 / B31.1 / B31.3, PED, GOST, SIL3, CRN, IBR, ISO9001
Actuator Types:	Pneumatic or Hydraulic

84003 Series Trim Types

Trim Type (4th designation in numbering system)

Designation	Trim Type	Description	Available Flow Directions
0	Undefined	Custom Engineered / Non-Standard	FTO or FTC
1	Standard Quick Open	Basic ON/OFF Function With No Control Element	FTC only
2	Lo-dB Single-Stage	Drilled Hole Cage With No Diffusers	FTO or FTC
3	Lo-dB Multi-Stage	Drilled Hole Cage With Diffuser(s)	FTO or FTC
4	V-Log	Disk Stack Cage With Tortuous Flow Channels	FTO only

FLOW TO CLOSE

Trim Type 1

Trim Type: Standard Quick Open
Description: No Controlling Element, On/ Off Function.

Trim Type 2

Trim Type: Lo-dB Single-Stage
Description: Control and noise reduction is achieved through a single drilled hole cage.

Trim Type 3 (AB)

Trim Type: Lo-dB Multi-Stage
Description: Control and noise is achieved through a single drilled hole cage, and additional diffusers are added downstream of the seat to further reduce noise.

Trim Type 3 (AP)

Trim Type: Lo-dB Multi-Stage
Description: Control and noise is achieved through a drilled hole plug skirt, and additional diffusers are added downstream of the seat to further reduce noise.

FLOW TO OPEN

Trim Type 2

Trim Type: Lo-dB Single-Stage
Description: Control and noise reduction is achieved through a single removable cage.

Trim Type 3

Trim Type: Lo-dB Multi-Stage
Description: Control and noise reduction is achieved through a Multi-Stage cage.

Trim Type 3

Trim Type: V-Log
Description: Control and noise reduction is achieved through a stack of precision machined plates, which create a tortuous flow path.
